Subject Index of Volume 237

Adhesion
studies on the interfaces and adhesion mechanisms in reinforced diamond composite coatings, 181
Adsorption
C-adsorption behaviour of thin fluoride films, 250
doping mechanisms of phthalocyanines by oxidizing gases: application to gas sensors, 272
Alloys
electro-oxidation of ethanolamine on modified layers of Cu–Ni alloys in alkaline environment, 148
Aluminium
influence of oxygen partial pressure on the adhesion of metallic films evaporated on PET, 164
Aluminium oxide
compositional and structural analysis of aluminum oxide films prepared by plasma-enhanced chemical vapor deposition, 57
Amino acids
molecular arrangement and polycondensation of octadecyl esters of aromatic amino acids in Langmuir–Blodgett films, 244
Amorphous materials
comparative study of large grains and high-performance TFTs in low-temperature crystallized LPCVD and APCVD amorphous silicon films, 255
electron spectroscopic study of the growth, composition and stability of GeS_x films prepared in ultra-high vacuum, 134
light-induced changes in the photoconductivity of rapidly-deposited hydrogenated amorphous silicon films, 310
phase formation in films of the As_2Se_3–Yb system, 213
preparation and properties of amorphous TiO_2 thin films by plasma enhanced chemical vapor deposition, 105
Annealing
characterization of spin-coated silicate and phosphosilicate thin films prepared by the sol–gel method, 314
Antimony
growth and crystallographic, surface and defect structures of anitmony particles deposited in a high-resolution transmission electron microscope, 155
Atomic force microscopy
surface characterization of nitrogen-ion-implanted etched and polished AISI 316 stainless steel, 175
Auger electron spectroscopy
electron spectroscopic study of the growth, composition and stability of GeS_x films prepared in ultra-high vacuum, 134
microstructure and composition analysis of $PbTiO_3$ films, 160
studies on the interfaces and adhesion mechanisms in reinforced diamond composite coatings, 181

Boron
pulsed laser deposition of BN onto silicon (100) substrates at 600 °C, 48
Boron nitride
boron nitride films prepared by remote plasma-enhanced chemical vapour deposition from borazine ($B_3N_3H_6$), 32

Chemical vapour deposition
comparative study of large grains and high-performance TFTs in low-temperature crystallized LPCVD and APCVD amorphous silicon films, 255
compositional and structural analysis of aluminum oxide films prepared by plasma-enhanced chemical vapor deposition, 57
thermodynamical study of the preparation of $CuInSe_2$ thin films in vertical closed tube systems, 129
Chemisorption
doping mechanisms of phthalocyanines by oxidizing gases: application to gas sensors, 272
structural and opto-electronic properties of chemically deposited Cu_xS thin film and the precipitate, 141
Coatings
oxidation behaviour of AISI-304 steel in presence of Na_2SO_4 and $Fe_2(SO_4)_3$ at 973 K, 172
studies on the interfaces and adhesion mechanisms in reinforced diamond composite coatings, 181
Conductivity
microstructure and electrical resistivity of TiN films deposited on heated and negatively biased silicon substrates, 78
Copper
electrodeposition of $CuInSe_2$ thin films from aqueous citric solutions. I. Influence of potential and mass transfer rate on composition and structure of films, 66
electrodeposition of $CuInSe_2$ thin films from aqueous citric solutions. II. Investigation of macrokinetics of electrodeposition by means of rotating disk electrode, 72
influence of oxygen partial pressure on the adhesion of metallic films evaporated on PET, 164
Crystallization
comparative study of large grains and high-performance TFTs in low-temperature crystallized LPCVD and APCVD amorphous silicon films, 255
microstructure and electrical resistivity of TiN films deposited on heated and negatively biased silicon substrates, 78

Deposition process
boron nitride films prepared by remote plasma-enhanced chemical vapour deposition from borazine ($B_3N_3H_6$), 32
GaN films prepared by ECR plasma-assisted deposition, 124
Mossbauer study of Fe–Al–O layers obtained by ion-beam deposition and ion implantation, 208
phthalocyanines ultrathin alternating layer film on silicon, prepared by molecular beam deposition, 87
thermodynamical study of the preparation of $CuInSe_2$ thin films in vertical closed tube systems, 129
Diamond
studies on the interfaces and adhesion mechanisms in reinforced diamond composite coatings, 181
Dielectric properties
excitation of surface plasmons on titanium nitride films: determination of the dielectric function, 277
Dielectrics
boron nitride films prepared by remote plasma-enhanced chemical vapour deposition from borazine ($B_3N_3H_6$), 32

Elastic properties
elastic and structural properties of f.c.c. {111} thin films. Part 2. A monolayer on a {110} b.c.c. substrate, 297
Electrical properties and measurements
GaN films prepared by ECR plasma-assisted deposition, 124
low-temperature epitaxial growth of undoped and n-doped silicon by photochemical vapor deposition using $SiH_4/SiH_2Cl_2/H_2/PH_3$ mixtures, 98

scanning tunneling microscopy imaging of conducting Langmuir–Blodgett films, 225
structural and opto-electronic properties of chemically deposited Cu_xS thin film and the precipitate, 141
structure and chemistry of $CuInSe_2$ for solar cell technology: current understanding and recommendations, 1
Electrochemistry
electro-oxidation of ethanolamine on modified layers of Cu–Ni alloys in alkaline environment, 148
electrodeposition of $CuInSe_2$ thin films from aqueous citric solutions. I. Influence of potential and mass transfer rate on composition and structure of films, 66
electrodeposition of $CuInSe_2$ thin films from aqueous citric solutions. II. Investigation of macrokinetics of electrodeposition by means of rotating disk electrode, 72
electrodeposition of zinc selenide, 118
stability of conductance in electroinactive polypyrrole, 268
Electrochromic
observation of non-ideal lithium insertion into sputtered thin films of tungsten oxide, 320
Electron microscopy
growth and crystallographic, surface and defect structures of antimony particles deposited in a high-resolution transmission electron microscope, 155
phthalocyanines ultrathin alternating layer film on silicon, prepared by molecular beam deposition, 87
Epitaxy
elastic and structural properties of f.c.c. {111} thin films. Part 2. A monolayer on a {110} b.c.c. substrate, 297
low-temperature epitaxial growth of undoped and n-doped silicon by photochemical vapor deposition using $SiH_4/SiH_2Cl_2/H_2/PH_3$ mixtures, 98
pulsed laser deposition of BN onto silicon (100) substrates at 600 °C, 48
structural characterization of Si/Ge superlattices grown on an Si(001) surface by molecular beam epitaxy, 282
Evaporation
Hall effect in MnTe films, 187
phase formation in films of the As_2Se_3–Yb system, 213

Fluoride
C-adsorption behaviour of thin fluoride films, 250
Fourier transform infrared spectroscopy
C-adsorption behaviour of thin fluoride films, 250
characterization of spin-coated silicate and phosphosilicate thin films prepared by the sol–gel method, 314
phthalocyanines ultrathin alternating layer film on silicon, prepared by molecular beam deposition, 87
X-ray photoelectron and vibrational spectroscopic studies on Te–C:H films for optical disk memory, 91

Gallium arsenide
excitation of surface plasmons on titanium nitride films: determination of the dielectric function, 277
Germanium
structural characterization of Si/Ge superlattices grown on an Si(001) surface by molecular beam epitaxy, 282
Glow discharge
changes of the optical properties of plasma polymer silver composite films caused by laser-annealing, 193
Graphite
role of additive on the physico-chemistry of graphite-based transfer films, 38
Growth mechanism
electron spectroscopic study of the growth, composition and stability of GeS_x films prepared in ultra-high vacuum, 134
lamellar-columnar transition in Langmuir–Blodgett multilayers of cadmium soaps, 236

Halides
low-temperature epitaxial growth of undoped and n-doped silicon by photochemical vapor deposition using $SiH_4/SiH_2Cl_2/H_2/PH_3$ mixtures, 98
Hall effect
Hall effect in MnTe films, 187
Hardness
surface characterization of nitrogen-ion-implanted etched and polished AISI 316 stainless steel, 175
Heat treatment
Hall effect in MnTe films, 187
High energy electron diffraction
phase formation in films of the As_2Se_3–Yb system, 213

Indium
electrodeposition of $CuInSe_2$ thin films from aqueous citric solutions. I. Influence of potential and mass transfer rate on composition and structure of films, 66
electrodeposition of $CuInSe_2$ thin films from aqueous citric solutions. II. Investigation of macrokinetics of electrodeposition by means of rotating disk electrode, 72
Indium selenide
X-ray, reflection high electron diffraction and X-ray photoelectron spectroscopy studies of InSe and γ-In_2Se_3 thin films grown by molecular beam deposition, 291
Infrared spectroscopy
boron nitride films prepared by remote plasma-enhanced chemical vapour deposition from borazine ($B_3N_3H_6$), 32
Interfaces
influence of oxygen partial pressure on the adhesion of metallic films evaporated on PET, 164
microstructure and composition analysis of $PbTiO_3$ films, 160
Ion bombardment
GaN films prepared by ECR plasma-assisted deposition, 124
Mossbauer study of Fe–Al–O layers obtained by ion-beam deposition and ion implantation, 208
Ion implantation
Mossbauer study of Fe–Al–O layers obtained by ion-beam deposition and ion implantation, 208
surface characterization of nitrogen-ion-implanted etched and polished AISI 316 stainless steel, 175

Langmuir–Blodgett films
lamellar-columnar transition in Langmuir–Blodgett multilayers of cadmium soaps, 236
molecular arrangement and polycondensation of octadecyl esters of aromatic amino acids in Langmuir–Blodgett films, 244
scanning tunneling microscopy imaging of conducting Langmuir–Blodgett films, 225
structure and optical properties of Langmuir–Blodgett films based on ladder-type polyheteroarylenes prepared via polymer precursor, 231
Laser ablation
pulsed laser deposition of BN onto silicon (100) substrates at 600 °C, 48
Laser irradiation
changes of the optical properties of plasma polymer silver composite films caused by laser-annealing, 193
Lattice parameters
phase formation in films of the As_2Se_3–Yb system, 213
scanning tunneling microscopy imaging of conducting Langmuir–Blodgett films, 225

Metal
oxidation behaviour of AISI-304 steel in presence of Na_2SO_4 and $Fe_2(SO_4)_3$ at 973 K, 172
Molecular beam epitaxy
structural characterization of Si/Ge superlattices grown on an Si(001) surface by molecular beam epitaxy, 282
Monolayers
elastic and structural properties of f.c.c. {111} thin films. Part 2. A monolayer on a {110} b.c.c. substrate, 297
Mossbauer spectroscopy
Mossbauer study of Fe–Al–O layers obtained by ion-beam deposition and ion implantation, 208

Nitrides
GaN films prepared by ECR plasma-assisted deposition, 124
Nitrogen
pulsed laser deposition of BN onto silicon (100) substrates at 600 °C, 48

Optical coatings
C-adsorption behaviour of thin fluoride films, 250
Optical properties
effect of substrate temperature on the properties of sputtered tin oxide films, 112
structural and opto-electronic properties of chemically deposited Cu_xS thin film and the precipitate, 141
structure and chemistry of $CuInSe_2$ for solar cell technology: current understanding and recommendations, 1
Optical spectroscopy
structure and optical properties of Langmuir–Blodgett films based on ladder-type polyheteroarylenes prepared via polymer precursor, 231
Organic substances
lamellar-columnar transition in Langmuir–Blodgett multilayers of cadmium soaps, 236
stability of conductance in electroinactive polypyrrole, 268
Organometallic vapour deposition
preparation and properties of amorphous TiO_2 thin films by plasma enhanced chemical vapor deposition, 105
Oxidation
electro-oxidation of ethanolamine on modified layers of Cu–Ni alloys in alkaline environment, 148
Oxidation rates
oxidation behaviour of AISI-304 steel in presence of Na_2SO_4 and $Fe_2(SO_4)_3$ at 973 K, 172

Phase transitions
lamellar-columnar transition in Langmuir–Blodgett multilayers of cadmium soaps, 236
Photoconductivity
light-induced changes in the photoconductivity of rapidly-deposited hydrogenated amorphous silicon films, 310
stability of conductance in electroinactive polypyrrole, 268
Physical vapour deposition
growth and crystallographic, surface and defect structures of antimony particles deposited in a high-resolution transmission electron microscope, 155
Plasma processing and deposition
preparation and properties of amorphous TiO_2 thin films by plasma enhanced chemical vapor deposition, 105
Polymers
changes of the optical properties of plasma polymer silver composite films caused by laser-annealing, 193
doping mechanisms of phthalocyanines by oxidizing gases: application to gas sensors, 272
influence of oxygen partial pressure on the adhesion of metallic films evaporated on PET, 164
molecular arrangement and polycondensation of octadecyl esters of arometic amino acids in Langmuir–Blodgett films, 244
stability of conductance in electroinactive polypyrrole, 268
structure and morphology of Langmuir–Blodgett films of rod-like poly(phthalocyaninato germoxane)s, studied by transmission electron microscopy, 217
structure and optical properties of Langmuir–Blodgett films based on ladder-type polyheteroarylenes prepared via polymer precursor, 231

Raman scattering
role of additive on the physico-chemistry of graphite-based transfer films, 38
X-ray photoelectron and vibrational spectroscopic studies on Te–C:H films for optical disk memory, 91
Reaction kinetics
molecular arrangement and polycondensation of octadecyl esters of aromatic amino acids in Langmuir–Blodgett films, 244
thermodynamical study of the preparation of $CuInSe_2$ thin films in vertical closed tube systems, 129
Resistivity
influence of low energy ion bombardment on the properties of TiN films deposited by r.f. magnetron sputtering, 200

Scanning tunneling microscopy
scanning tunneling microscopy imaging of conducting Langmuir–Blodgett films, 225
Secondary ion mass spectrometry
phthalocyanines ultrathin alternating layer film on silicon, prepared by molecular beam deposition, 87
Selenides
electrodeposition of $CuInSe_2$ thin films from aqueous citric solutions. I. Influence of potential and mass transfer rate on composition and structure of films, 66
electrodeposition of $CuInSe_2$ thin films from aqueous citric solutions. II. Investigation of macrokinetics of electrodeposition by means of rotating disk electrode, 72
electrodeposition of zinc selenide, 118
thermodynamical study of the preparation of $CuInSe_2$ thin films in vertical closed tube systems, 129
Semiconductors
electrodeposition of zinc selenide, 118
Hall effect in MnTe films, 187
structure and chemistry of $CuInSe_2$ for solar cell technology: current understanding and recommendations, 1
Sensors
doping mechanisms of phthalocyanines by oxidizing gases: application to gas sensors, 272
Silicon
comparative study of large grains and high-performance TFTs in low-temperature crystallized LPCVD and APCVD amorphous silicon films, 255
light-induced changes in the photoconductivity of rapidly-deposited hydrogenated amorphous silicon films, 310
low-temperature epitaxial growth of undoped and n-doped silicon by photochemical vapor deposition using $SiH_4/SiH_2Cl_2/H_2/PH_3$ mixtures, 98

structural characterization of Si/Ge superlattices grown on an Si(001) surface by molecular beam epitaxy, 282
Silicon oxide
characterization of spin-coated silicate and phosphosilicate thin films prepared by the sol–gel method, 314
Silver
changes of the optical properties of plasma polymer silver composite films caused by laser-annealing, 193
Solar cells
structure and chemistry of $CuInSe_2$ for solar cell technology: current understanding and recommendations, 1
Sputtering
effect of substrate temperature on the properties of sputtered tin oxide films, 112
influence of low energy ion bombardment on the properties of TiN films deposited by r.f. magnetron sputtering, 200
microstructure and electrical resistivity of TiN films deposited on heated and negatively biased silicon substrates, 78
observation of non-ideal lithium insertion into sputtered thin films of tungsten oxide, 320
Stress
influence of low energy ion bombardment on the properties of TiN films deposited by r.f. magnetron sputtering, 200
Structural properties
effect of substrate temperature on the properties of sputtered tin oxide films, 112
Surface morphology
growth and crystallographic, surface and defect structures of antimony particles deposited in a high-resolution transmission electron microscope, 155
oxidation behaviour of AISI-304 steel in presence of Na_2SO_4 and $Fe_2(SO_4)_3$ at 973 K, 172
structure and morphology of Langmuir–Blodgett films of rod-like poly(phthalocyaninato germoxane)s, studied by transmission electron microscopy, 217
Surface plasmons
excitation of surface plasmons on titanium nitride films: determination of the dielectric function, 277

Tellurium
Hall effect in MnTe films, 187
X-ray photoelectron and vibrational spectroscopic studies on Te–C:H films for optical disk memory, 91
Thermal desorption
characterization of spin-coated silicate and phosphosilicate thin films prepared by the sol–gel method, 314
Tin oxide
effect of substrate temperature on the properties of sputtered tin oxide films, 112
Titanium nitride
excitation of surface plasmons on titanium nitride films: determination of the dielectric function, 277
influence of low energy ion bombardment on the properties of TiN films deposited by r.f. magnetron sputtering, 200
microstructure and electrical resistivity of TiN films deposited on heated and negatively biased silicon substrates, 78
Titanium oxide
preparation and properties of amorphous TiO_2 thin films by plasma enhanced chemical vapor deposition, 105
Transmission electron microscopy
comparative study of large grains and high-performance TFTs in low-temperature crystallized LPCVD and APCVD amorphous silicon films, 255
compositional and structural analysis of aluminum oxide films prepared by plasma-enhanced vapor deposition, 57
influence of oxygen partial pressure on the adhesion of metallic films evaporated on PET, 164
microstructure and composition analysis of $PbTiO_3$ films, 160
role of additive on the physico-chemistry of graphite-based transfer films, 38
Tribology
role of additive on the physico-chemistry of graphite-based transfer films, 38
Tungsten oxide
observation of non-ideal lithium insertion into sputtered thin films of tungsten oxide, 320

X-ray diffraction
electro-oxidation of ethanolamine on modified layers of Cu–Ni alloys in alkaline environment, 148
microstructure and composition analysis of $PbTiO_3$ films, 160
structural and opto-electronic properties of chemically deposited Cu_xS thin film and the precipitate, 141
structure and optical properties of Langmuir–Blodgett films based on ladder-type polyheteroarylenes prepared via polymer precursor, 231
surface characterization of nitrogen-ion-implanted etched and polished AISI 316 stainless steel, 175
X-ray photoelectron spectroscopy
compositional and structural analysis of aluminum oxide films prepared by plasma-enhanced chemical vapor deposition, 57
electron spectroscopic study of the growth, composition and stability of GeS_x films prepared in ultra-high vacuum, 134
structural and opto-electronic properties of chemically deposited Cu_xS thin films and the precipitate, 141
X-ray photoelectron and vibrational spectroscopic studies on Te–C:H films for optical disk memory, 91
